

## Overview

---

L2 are an independent consultancy providing management advisory services, regulatory advisory services and decommissioning & waste management consultancy to the nuclear industry.

Our aim is to support both new and established companies across the entire nuclear fuel cycle with the best independent advice to achieve their stated outcome, ensuring delivery to programme and regulatory acceptability.

We are knowledgeable in a range of UK and International nuclear industry standards, processes and have extensive experience in nuclear licensed site construction, operations, decommissioning and clean-up. Our advice and solutions are based on decades of real implementation experience not just the consultancy theory.

We aim to share our experience in nuclear industry with client teams via formalised Knowledge Transfer, empowering client teams to develop their own capabilities as they build, operate and support nuclear plant.

One of the unique aspects of our offering is that our consultants have owned and operated a range of nuclear licensed facilities throughout the UK involving the full range of regulators and stakeholders. Our consultants also have extensive contracting experience in the sector across the full range of the nuclear fuel cycle.

# KEY MESSAGES

---

## Introduction

---

The nuclear industry is enjoying a global renaissance, with governments seeking to tackle the key issues of climate change, energy security and legacy clean-up. L2 are an organisation of nuclear industry personnel who have experience across the entire nuclear fuel cycle that can be brought to bear on both new nuclear build and clean-up projects.

L2 recognise that risk management plays a fundamental part of any nuclear project for a range of stakeholders including investors, plant owners, constructors, regulators and the supply chain. We seek to bring knowledge and experience to support the range of stakeholders in understanding and balancing key risks including construction, market, organisational, regulatory, legal, environmental, operations and backend. Overall our job is to help clients identify and mitigate risks to their business activities in an appropriate governance structure.

## Assurance

---

L2 is committed to achieving the highest possible safety, environment, quality and security standards and seek to continually improve our performance. This is achieved by implementing systems and practices that are appropriate to the company's activities. We will achieve our vision by continuously developing a motivated team of people who listen to our customers and deliver all of our services in a safe and efficient manner.

## Clients

---

L2 understand and strive to exceed customer expectations, while continuously improving our business processes, technical knowledge and customer service. We provide our clients with the most cost effective and responsive services to their business needs. We are passionate in delivery for our customers, as their success is ours.

We ensure success by providing experienced personnel who are dedicated to your project and will spend whatever time is needed in your offices to meet delivery requirements.
